

The roof of a lifetime

LOTS' roofing shingles are made from dense Wallaba wood, world renowned for its strength and durability. We assure the highest grade, finest cut, and consistent quality. Wallaba is significantly stronger than Red Cedar, Kempas or Treated Pine Shingles.

The benefits of Wallaba include:

- Highly resistant to insects and decay
- Exceptional resistance to fire
- Absolutely no chemical treatment required
- Assumes a silver patina hue with age
- Life span of over 50 years
- Low maintenance

Wallaba shingles can resist winds of up to 170mph when properly installed. This highly dense wooden shingle has a coarse texture and a grain that is typically straight.

The Wallaba Shingles weather to a beautiful silver patina colour making the roof reflective and cool. This allows the shingles to act as insulators, reducing environmental heating and keeping structures cooler.
